Summary

AI Product Designer and frontend developer who owns the full arc from customer problem to shipped code. Extensive experience uniting product thinking, interaction and visual design, and full-stack development to deliver customer-facing web products. Proven ability to translate ambiguous, real-world workflows into intuitive user flows, interactive prototypes, and production-ready applications built with React, TypeScript, and Next.js. AI-native in practice, leveraging agentic design and coding tooling to move from concept to deployed experience quickly, and designing conversational and AI-mediated experiences that are clear and trustworthy. Strong foundation in UX research, design systems, and usability testing, complemented by a track record of shipping products adopted by customers.

Work Experience

Product Designer & Frontend Developer, Freelance / Self-Employed, Los Angeles

11/2016 – Present

- Own end-to-end product design and delivery of responsive, customer-facing web products, driving each from customer problem and interaction/visual design through to shipped, production code.
- Build and ship production experiences in React, TypeScript, Next.js, Vite, Tailwind CSS, Supabase, Flask, and Stripe, wiring up authentication and modern deployment workflows rather than handing off mockups.
- Designed and built LitmusAI, an AI-literacy platform featuring readiness assessments, personalized training modules, certifications, progress tracking, dashboard analytics, secure authentication, and integrated payments, including its conversational and AI-driven surfaces.
- Transform product concepts into comprehensive user flows, wireframes, interactive prototypes, maintainable design systems, and accessible frontend implementations.
- Use AI-native design and agentic coding tooling to accelerate research synthesis, prototyping, code generation, debugging, and quality assurance, while documenting tradeoffs and product decisions along the way.

Principal UX/UI Designer, Blue Shield of California, Oakland

04/2022 – 07/2025

- Drove product design and direction for regulated healthcare web and mobile initiatives, turning ambiguous, real-world requirements into member-facing user flows, interactive prototypes, and developer-ready specifications.
- Crafted cohesive, inclusive user experiences across web and mobile, improving task clarity, user confidence, and completion rates through rigorous usability testing.
- Produced detailed personas, journey maps, wireframes, high-fidelity prototypes, and executive narratives to align stakeholders and guide product prioritization, grounded in how members actually use the product.
- Established a library of reusable interaction patterns, UI specifications, and component guidelines, significantly reducing design and engineering ambiguity across responsive workflows.
- Partnered across product, engineering, research, compliance, and business teams so design decisions served both user needs and organizational outcomes.

Frontend Engineer, CLLCTVE Inc. (Techstars Startup), Los Angeles

05/2020 – 02/2022

- Built responsive, mobile-first React.js interfaces and reusable Ant Design components for a creator platform supporting over 500 creators, 15 brand partnerships, and an 85% retention rate.
- Shipped production code directly from design intent, partnering closely with designers to turn mockups and interaction concepts into pixel-perfect, customer-facing experiences.
- Executed user research and contributed to prioritizing product enhancements, facilitating the successful launch of two high-demand features.
- Instituted a reusable component library that elevated design consistency and accelerated delivery in a fast-moving startup environment.

UX/UI Designer, IMPROV Learning, Woodland Hills

09/2018 – 10/2019

- Optimized responsive website layouts and marketing funnels using research findings and performance data to enhance engagement, content clarity, and conversion rates.
- Developed targeted email campaigns and digital assets, achieving a 20% increase in email open rates.
- Implemented A/B tests and iterative UX improvements to bolster usability, user retention, and clarity within the customer journey.

Freelance UX/UI Designer, A Different Kind of Creative – Doggy Date, Los Angeles

04/2017 – 07/2017

- Owned the complete UX/UI design lifecycle for an iOS social product, from initial character concepts and product flows through to high-fidelity interface design.
- Applied design-thinking methodologies to architect user-centered experiences and partnered with an iOS developer via Zeplin to deliver precise specifications and assets.

Freelance UX/UI Designer, Tech Noir, Los Angeles

11/2016 – 12/2016

- Investigated user research on wearable-technology purchasing behavior, focusing on the interrelations between aesthetics, user trust, and product functionality.
- Architected the primary user flow and key discovery pages for a specialized marketplace showcasing wearable-technology designers and their products.

Education

Certification, Full Stack Web Development, UCLA Extension, Los Angeles

2020 – 2020

Certification, User Experience Design, General Assembly, Santa Monica

2016 – 2016

Bachelor of Fine Arts, Graphic Design, The Art Institute of California, Los Angeles

2011 – 2014
